SECTION 1.0

INTRODUCTION

In October 1996, Montgomery Watson (Montgomery) was retained by McDonnell Douglas Realty Company, now the Boeing Realty Corporation (BRC), to assist with the redevelopment of Parcel A (the Site) of their C-6 Facility located in Los Angeles, California. The Site consists of the northernmost quarter of the C-6 Facility, encompassing approximately 50 acres.

This document is provided as an addendum to the *Stockpile and Post-Remedial Excavation Confirmation Sample Report, Parcel A, Report No. 4* (Montgomery Watson, 1998; "the Report"). The purpose of this document is to present soil quality data collected from a deep soil boring drilled to assess the depth of diesel-affected soil at the above-referenced Site.

As presented in the Report, Open Area No. 1 is located along the eastern portion of the Site, east of Building 37 and Building 41 extending to the Normandie Avenue property boundary. Open Area No. 1 was so designated because of its absence of structures, except for the former Building 43/44 water tanks in the northeast corner.

Building 41 was formerly used as a boiler house. The water tanks located at Building 43/44 in the northeast corner of Open Area No. 1 were formerly used to store diesel fuel oil which was pumped into Building 41 through buried product pipelines. These tanks were converted from diesel storage to water tanks (part of the C-6 facility's fire suppression system) approximately 25 years ago. The abandoned product lines leading from the tanks to Building 41 were discovered during the demolition process, and remedial excavations discussed in the Report were conducted to remove primarily hydrocarbon-affected soil associated with releases from these product lines.

Remedial excavations associated with the hydrocarbon-affected soil are described in the Report. The maximum excavation depth was approximately 12 feet; however, residual hydrocarbon-affected soil was present at the depth of 12 feet at remedial excavation OA1-RE-1.

At the request of the Regional Water Quality Control Board (RWQCB), a deep soil boring was advanced to assess the vertical extent of the affected soil at remedial excavation OA1-RE-1. The boring was located at the elbow in the product lines where residual hydrocarbons at the depth of 12 feet were present in concentrations above soil screening levels in confirmation sample OA1-GS-14-12', as presented in the Report. The location

of the boring is presented in Figure 1 (Appendix A). The boring was designated “PL-B1” (representing “Product Lines-Boring No. 1”).

SECTION 2.0

FIELD ACTIVITIES

Field activities were performed on May 17, 1997. All work was performed under the direction of a California Registered Geologist and in accordance with a site-specific health and safety plan. Montgomery Watson subcontracted drilling services to advance boring PL-B1, and provided a California Registered Geologist in the field to oversee the drilling and sampling activities.

Soil samples and quality assurance/quality control samples were collected for analysis in accordance with procedures outlined in the *Sampling and Analysis Plan for Demolition Activities at the Douglas Aircraft Company C-6 Facility* prepared by Integrated Environmental Services, Inc. (IESI, 1997) which was previously submitted to and approved by the RWQCB.

2.1 DRILLING AND SAMPLING PROCEDURES

A truck-mounted mobile drill rig equipped with 6-inch outer diameter hollow-stem augers was used to advance boring PL-B1 to the total depth of 50 feet beneath grade level (bgl) (38 feet beneath the base of remedial excavation OA1-RE-1). During drilling of boring PL-B1, soil samples were retrieved at 5-foot intervals for the purpose of describing the soils. The soil samples were screened for volatile organic vapor content in the field using a photoionization detector (PID). PID readings are included on the boring log (Appendix B).

Soil samples were retrieved for chemical analysis at depths of 20, 30, 40, and 50 feet bgl and designated PL-B1-20', PL-B1-30', PL-B1-40', and PL-B1-50', respectively. The soil samples were retrieved using a California modified split-spoon sampler equipped with precleaned stainless steel sample sleeves.

Two sample sleeves were retained for analysis at each sampling interval. Upon retrieval, the ends of the sample sleeves were covered with Teflon swatches, capped with plastic end caps, labeled, placed in ziploc bags, logged on a chain-of-custody form, and stored in a cooler chilled with blue ice.

2.2 DECONTAMINATION, CONTAINMENT, AND ABANDONMENT

The split-spoon sampler was decontaminated prior to each use by the following method:

- Wash with Alconox and tap water.
- Rinse with tap water.

- Double rinse with distilled water.

Soil cuttings and cleaning rinsate were stored on-site in Department of Transportation-approved 55-gallon steel drums pending proper disposal. Boring PL-B1 was backfilled upon completion with hydrated bentonite chips

2.3 QUALITY ASSURANCE/QUALITY CONTROL

The following quality assurance/quality control (QA/QC) samples were collected:

- 1) One rinsate blank consisting of laboratory-grade deionized water poured through a precleaned sampling sleeve to assess cross-contamination from the sampling equipment.
- 2) One equipment blank consisting of laboratory-grade deionized water poured through a cleaned split-spoon sampler to assess the effectiveness of the decontamination process.
- 3) One trip blank consisting of deionized water provided by the laboratory to assess cross-contamination from sample handling procedures.

2.4 ANALYTICAL PROGRAM

Soil samples PL-B1-20', PL-B1-30', PL-B1-40', PL-B1-50', and the QA/QC samples were submitted under chain-of-custody documentation to a state-certified laboratory for chemical analysis. Each sample was analyzed for the following constituents:

<u>EPA Method</u>	<u>Analyte(s)</u>
8260	Volatile Organic Compounds (VOCs)*
8270	Semi-volatile Organic Compounds (SVOCs)
6000/7000	CCR Title 22 metals
8080	Pesticides and PCBs **

* The trip blank was analyzed for volatile organic compounds only.

** Rinsate blank and equipment blank only.

SECTION 3.0

RESULTS AND CONCLUSIONS

3.1 SOIL CHARACTER

The soils encountered in boring PL-B1 were logged in accordance with the Unified Soil Classification System. The soil encountered consisted of silt and sandy silt from 12 to 27 feet bgl; silty sand and sandy silt from 27 to 39 feet bgl; clayey silt and silt from 39 to 50 feet bgl. Groundwater was not encountered in boring PL-B1. Soil descriptions are presented on the enclosed boring log.

3.2 ANALYTICAL RESULTS

Analytical data are summarized in Table 1 and discussed below.

VOCs: A total of eight VOCs were detected in samples collected from the depths of 20 feet, 30 feet, and 40 feet bgl. VOCs were not detected in the sample collected from 50 feet bgl.

SVOCs: A total of 13 SVOCs were detected in samples collected from the depths of 20 feet, 30 feet, and 40 feet bgl. SVOCs were not detected in the sample collected from the depth of 50 feet bgl.

Metals: All metal concentrations were less than total threshold limit concentrations (TTLC) and 10 times the soluble threshold limit concentrations (STLC).

QA/QC Samples: Analytes were not detected in the QA/QC samples.

Laboratory analytical data sheets are presented in Appendix C.

3.3 CONCLUSIONS

The data suggest that chemicals of concern in soil are confined to the upper 50 feet bgl.

Analytes were not detected in the rinsate blank, indicating that the precleaned sampling sleeves did not compromise the data quality. Analytes were not detected in the equipment blank, indicating that the decontamination procedures were effective and did not compromise the data quality. Analytes were not detected in the trip blank, indicating that sample handling techniques did not compromise the data quality.

Carbon Chain Range (mg/kg)	8015m	--	--	--	--			
PCBs (µg/kg)	8080	--	--	--	--			

mg/kg = milligrams per kilogram

µg/kg = micrograms per kilogram

mg/L = milligrams per liter

-- = not analyzed

bgl = below original grade level

VOCs = Volatile Organic Compounds

SVOCs = Semi-volatile Organic Compounds

TRPH = Total Recoverable Petroleum Hydrocarbons

PCBs = polychlorinated biphenyls

(1) VOCs and SVOCs not listed were not detected

TTLC = California Total Threshold Limit Concentration

STLC = California Soluble Threshold Limit Concentration

* Refer to Figure 1 for sample location

** STLC is 560 mg/L when TCLP is performed and result is less than 5 mg/L per CCR Title 22.
